

# **CAPABILITY** STATEMENT

**| A renowned  
service provider  
for projects in  
construction,  
infrastructure  
and resources.**

**BRW Transport and Quarries (BRW) provides an integrated supply chain of quarry materials, transport services, and machinery and vehicle hire, to support construction, infrastructure, and resources projects.**

Proudly based in the Mackay region, we support our customers with reliable, value for money services and supplies, with dedication to specific project needs.

# 1998

## **The BRW story: From 1 man and 3 trucks**

BRW was established in 1998 with one man and three trucks, and has expanded to become a diversified and integrated provider of:

quarry materials

transport services

vehicle and  
machinery/equipment hire

We have grown to become a team of over 70, who maintain and operate our transport fleet and machinery, and manage our quarry operations and sales. Our work is undertaken to the highest standards and best industry practice, backed with quality accreditation.

BRW has the capability to meet individual customer needs, along with high-level government and private sector projects.

In the case of quarry products for example, we are selected as partners on key projects because of our proven capability to provide required material quantities, on time, and with quality and cost certainty.

## In-house engineering to drive compliance, safety, reliability and innovation

As the cornerstone of our operations is quality and reliability, we operate an in-house mechanical servicing workshop.

Our team of six engineering and mechanical specialists ensure all of the fleet and inventory is fully maintained and compliant with safety requirements.

This is part of our commitment to the safety of our workers, customers, and the community.

## Customer engagement

Our resource depth allows us to support projects of all dimensions, while always maintaining close customer engagement and support, irrespective of the value of the contract.

While we have grown, we haven't lost our roots - we are still a family-owned company founded on the country values of customer service and reliability.

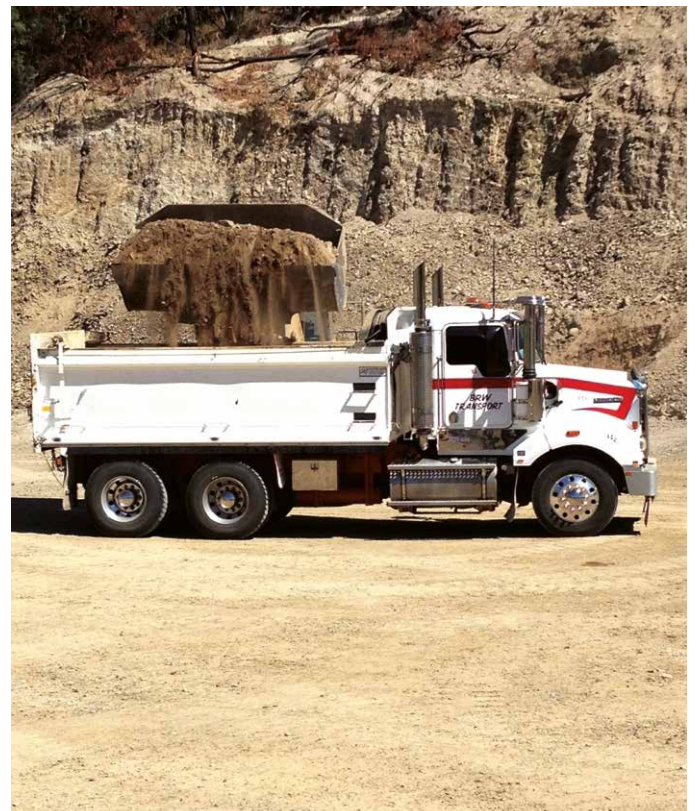

## ■ BRW's large, diversified transport fleet and construction machinery supports diverse customer projects

BRW maintains and operates a large, diverse and modern fleet of heavy vehicles and other machinery to provide supply chain and logistics certainty for our customers.

A core part of our services offer is the haulage of quarry products to project sites, providing our customers with end-to-end materials solutions.

BRW also has a comprehensive fleet of low-loaders to transport heavy equipment on demand, at short notice.

In addition to contracted transport services and quarry resources delivery, we also provide vehicles and drivers (as wet hire) to meet customer needs. This can be on a daily or weekly basis, or longer depending on project needs.

## A hub of innovation

If a new solution is needed, our industrious team designs and builds new equipment capability. Our workshop is a hub of innovation, with bespoke, best-for-project equipment designed and built within our workshop

## ■ High quality quarry materials, with reliable volumes to support local infrastructure projects

A key part of the BRW story is our diversification into quarry operations from 2006, to complement our strengths in transportation.

We have steadily grown this business, and now operate five quarries in the Mackay and Isaac region.

At our fully licensed and accredited quarries, we yield high-grade, certified quarry products, which are produced to meet the exact specifications of each project and customer. This includes the production of road base, aggregates for various construction purposes, and ballast for rail infrastructure.

The production of our quarry materials is quality assured (through ISO standards) and meets the exacting standards of the Department of Transport and Main Roads, local councils, Aurizon, Queensland Rail, and other customers.

Our extraction allowances provide us with the flexibility to produce high volumes of high grade materials to meet client requirements.

## Full integration

Our quarrying operations are fully integrated, wherein we extract, screen, crush materials to specification, then load and haul to project sites.

## ■ Equipment availability for your projects

BRW owns, maintains and operates extensive and diverse inventories of vehicles, machinery, and equipment, which are available for hire.

Our inventories span a wide array of road/ rail/ infrastructure construction and maintenance equipment, and heavy haulage.

Included in our inventory is quarry materials extraction, reclaiming, and crushing equipment, most of which can be mobilised to project sites.

Our customers regularly supplement their equipment inventory through hire from BRW. This provides our client with a local VFM option rather than purchasing or shipping machinery from outside the region.

## Inventory list

Please visit our website for a list of our modern and well-maintained inventory:

## ■ Wide service range to meet your needs

Based in the Mackay region, we regularly support customers across Central and western Queensland, with reach to SEQ and North Queensland.

With a large fleet of modern transport vehicles and well-trained and experienced personnel, we have the service range to meet project needs, wherever this may be.

## ■ Our customer base demonstrates our reliability and contribution to our region

BRW's customer-base demonstrates our capability and reliability, and we are proud of our long-term customer relationships. This is demonstrated through repeat work and back-to-back contracts.

At a glance, some of our customers include:

- Department of Transport and Main Roads (DTMR) (RoadTek)
- Mackay Regional Council and Isaac Regional Council
- Queensland Rail
- Aurizon
- Downer EDI
- Fulton Hogan
- Jennchem.

Key projects have included works on the Peak Downs Highway, road upgrades for Council and DTMR across the Mackay region, and rail ballast upgrades.
